

Solar-Powered Reservoir Circulator

"Quality Water, Naturally"

The v12 units operate day and night totally on solar power !!

SB2500 / SB2500v12 / SB4000 / SB5000v12

Description

The SolarBee is a floating solar-powered pond and reservoir circulator constructed of stainless steel and corrosion resistant polymers. The 16' diameter machine draws up to 5,000 gallons per minute from below and spreads it gently across the top of the pond for continuous surface renewal. The mixing action greatly accelerates the biological and solar processes that clean up wastewater and freshwater.

Features

- Solar powered for no energy costs. Operates both day and night.
- Simple installation, no contractor required.
- Two year parts and labor warranty.
- Low maintenance, long life, stainless steel construction.
- Can be purchased outright, or on a lease purchase or on a rent-to-own basis.

The SolarBee Can Solve These Problems:

in Wastewater

- High Aeration Energy Costs
- Odor Events and Overloading
- Discharge Permit Problems
BOD, TSS, and Algae
High Ammonia (N) and Phosphorus (P)
High pH, Low DO
- Excessive Sludge Buildup
- Short Circuiting and Stratification

in Fresh Water

- Algae Blooms
- Taste and Odor in Drinking Water
- Fish Kills
- Odors
- Excessive Vegetation
- Appearance
- Eutrophication
- Optional Buoy Marker Lights for Boat Traffic

Basic Operation

The SolarBee's high flow mixing action accelerates the normal purification process in the pond through gentle, thorough mixing and surface re-aeration.
